The Lee Bulge Buster Kit restores free function of rimless cases that have low base bulges. Low base bulges usually occur from chambers that do not fully support the cartridge or cases resized in carbide dies from manufacturers other than Lee.

These show a noticeable stop ring near the base. You will most likely find cases with these problems in mixed range brass.

**WARNING** Steel parts in this product may be alloyed with trace amounts of lead and other elements which are known to the State of California to cause reproductive harm and cancer. For more information, go to [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov). To prevent exposure, do not alter the product by welding, grinding, etc.

### Lee Guarantee

**LEE RELOADING PRODUCTS** are guaranteed not to wear out or break from normal use for two full years or they will be repaired or replaced at no charge if returned to the factory. Any Lee product of current manufacture, regardless of age or condition, will be reconditioned to new, including a new guarantee, if returned to the factory with payment equal to half the current retail price.

### Crimp Sleeve Selection

- 380 Auto
- 357 Sig, 40 S&W, 10mm
- 400 COR-BON, 45 GAP, 45 ACP, 45 Win Mag
- 41 Action Express

### Instructions

1. **Install push pin into shell holder slot.**

2. **Remove adjusting screw and crimp sleeve from appropriate Lee Factory Crimp die.** Install guide sleeve into the Factory Crimp body.

3. **Raise the ram with push pin to the top of its stroke.** Screw the Factory Crimp Die into the press until the push pin enters the Factory Crimp Die—a minimum of ¼ inch. (This will push the case completely through the carbide insert.)

4. **Install the case catcher over the guide sleeve.** If you own a Pro 1000, Pro 4000 or Loadmaster, the guide sleeve is sized to accept the case feed tubes. Also sold separately # 90861

5. **Squeeze the tube when removing from the guide sleeve and you can transfer the filled tube directly to your progressive press.**

6. **Slide a resized or loaded case onto the base of the push pin (case mouth up) and raise the ram to push the case completely through the die.** The cases will accumulate in the catch container.

If you are using Lee carbide reloading dies, you likely will need to process cases during the first reloading only. Lee sizing dies have a special contour grind that usually prevents the objectionable base bulge that commonly occur on ordinary carbide dies.

**Need to increase bulge busting speed?**

Lee App press & App Bulge Buster kit allow you to automate case feeding and process cases as fast as you can pull the lever.
