Installing Bullet Sizing Kit on Automatic Processing Press (APP) press

1. Install Spline Drive bushing into base casting.

Loosen the hex screw on the spline drive bushing.

2. Remove the lock-ring from your sizing die, and install die counter-clockwise into spline drive bushing.

3. Die should be flush, to slightly below flush of the slide rail.

4. Lightly tighten hex clamp screw to retain position.

5. Install the appropriate sized punch into the shell holder adapter.

Install shell holder adapter into the upper App casting.

6. Push lubricated or coated bullets nose first through die. Sized bullets will exit the bottom of the die.

Note: Use 5 gal. bucket or your own catch container to collect the sized bullets.
