Portable Power

Think a reloading press cannot be mobile then think again as Lee have something to offer

Reloading - big and heavy presses bolted to benches. However, there is an alternative from Lee Precision that does the same job, albeit slower in a far more portable and in some ways practical way.

Their Hand Press is exactly what it says in that it's operated by two hands and does not require mounting. This scissors design consists of an alloy operating lever, which is hinged to the ram and a frame that holds the dies in an industry-standard, 7/8x14 TPI thread in the top of the body (planten). Both components being connected by a compound linkage. The kit comes with a powder funnel, case lube and a Ram Prime priming unit. A new addition and one included here is their Breech Lock quick change die adaptor. This consists of a removable, interrupted thread collar that's threaded 7/8x14 TPI for

“Despite its compact size the Hand Press is tough enough to handle even the larger calibres with a bit more effort”

the dies to screw into. So it takes just 1/3-turn to remove/replace dies.

Despite its compact size the Hand Press is tough enough to handle even

the larger calibres with a bit more effort. Priming is easy too though slow, plus it can be taken to the range and used for on the spot load development!
