The **AUTOMATIC CASE PRIME PRESS** (ACP) priming tool from Lee Precision guides cases into position using a "finger guide" and has the ability to automatically feed cases up to 2.5" long. No shell holders are required. Priming is positive, effortless and uniform. Positive and consistent seating depth is assured with the new dead-length priming device. Primers are seated uniformly without "feel" or adjustments required.

The **RAM SWAGE** primer pocket swager works on all single-stage presses with 7/8"-14 threads in the press frame that can accept universal press shell holders. It features spring-assisted case extraction, and an all-steel case guide ensures cases will be positively centered on the push rod. The shell holder-less design allows users to swage any small or large primer pocket without swapping to a different size shell holder.
